

CB-BFT vs QBFT - 15 validators, 5 tx/s, 150 s per run
Experiment 1: identical containers | Experiment 2: three CPU tiers (2.00 / 0.75 / 0.30 cores)

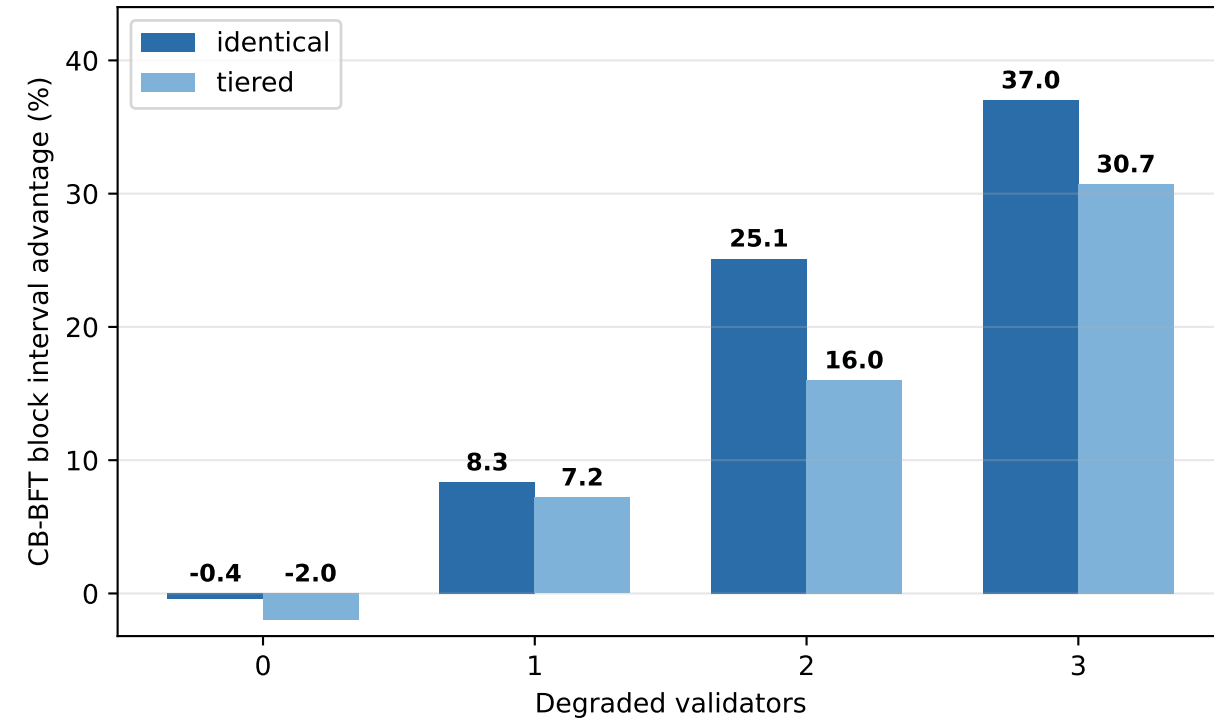

(a) Experiment 1 - identical containers

(b) Experiment 2 - heterogeneous CPU tiers

(c) The advantage replicates across both setups

(d) QBFT sheds load; CB-BFT does not
